

ReplixFax[®] for Windows

Enterprise Fax Messaging Solution Optimized for the Microsoft Windows Environment

Enterprise Fax Server for Mission Critical Business Fax Communication

ReplixFax for Windows is the right solution for Microsoft Windows environment that requires easy-to-use end user capabilities as well as high volume, mission critical fax integration with any business application. Supporting out-of-the-box Fax Server Clustering and Server Virtualization capabilities, the ReplixFax for Windows solution can handle mission critical business fax communication in a reliable, high performance and scalable manner for any organization to deliver cost savings and productivity increase.

As Easy as Using an E-mail or Print

If you can use e-mail, you can use ReplixFax for Windows to send and receive faxes effortlessly without any expensive training. Send a fax using the ReplixFax for Windows client or your familiar e-mail client such as Microsoft Outlook/Exchange or any SMTP e-mail system. The Print-to-Fax driver included in the ReplixFax for Windows allows you to send a fax by simply printing a file from within any Windows desktop application. Incoming faxes can be automatically routed into your e-mail inbox as an attachment so that you may view them easily just like an e-mail message.

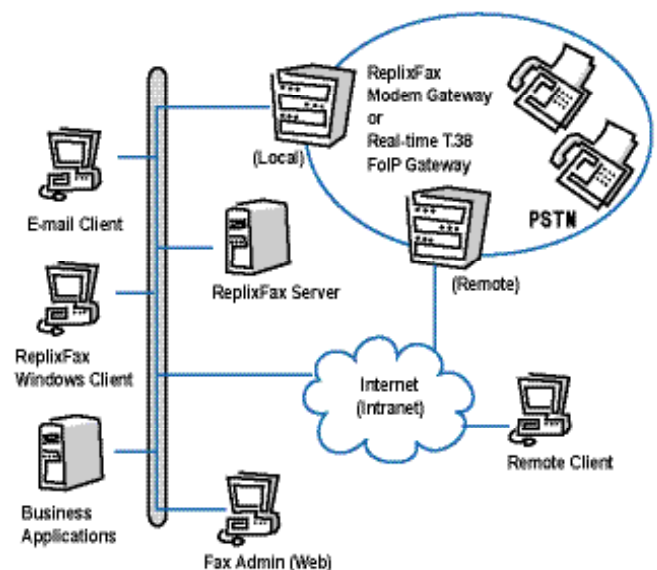

Business Application Integration Made Simple

Industries such as Healthcare, Financial Services and Manufacturing, to name a few, can streamline their e-document delivery processes from their host or server-based business applications using the ReplixFax Application Programming Interface (API). The ReplixFax for Windows system offers market tested, comprehensive Fax APIs along with the following support from Softlinx so that you may easily fax-enable your business application:

- SOAP or REST Fax APIs for both inbound and outbound faxing integration
- ReplixFax developer portal with full online documentation, sample code and tutorials
- Technical support to help your API integration

Features and Capabilities

- Comprehensive end-user desktop fax features – fax scheduling based on time and priority, real-time fax status notification, multiple retries, custom cover pages and billing codes
- Access to a variety of private and public address books including Microsoft AD
- Server-based rasterization for native file attachments of various file types
- Print-to-Fax driver with Windows Fax Client to support faxing from any Windows application

- SMTP Mail2Fax gateway for Email-to-Fax support and fax status notifications via email
- Fax data managed in a relational database
- Retransmission of failed-only fax pages
- Global-phone number dialing rule support
- Least Cost Routing over private WAN or the Internet to avoid long distance charges and/or support multiple carriers for outbound faxing
- Inbound fax routing to a network folder and/or a network printer
- Folder based, automated outbound faxing
- Accounting and charge-back billing support
- Logging and multi-server billing support via detailed Call Data Record (CDR)
- Real-time T.38 Fax over IP support
- Full support of global PSTN connectivity including analog, digital T1/E1 and ISDN

Fax Server Clustering and Virtualization

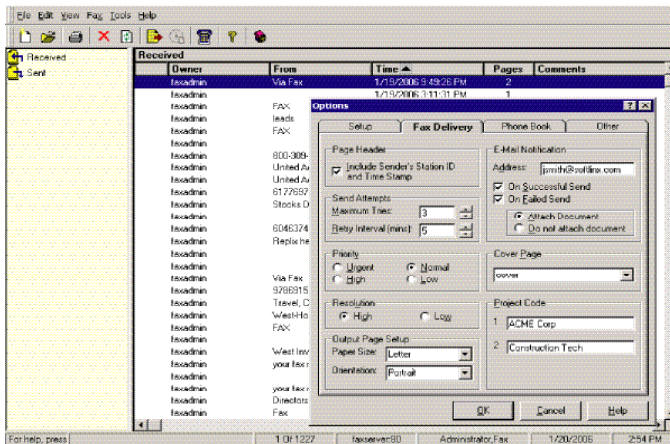

The ReplixFax system supports high availability through out-of-the-box Fax Server Clustering and Virtual Fax Server through server virtualization. Fax server clustering offers scalability, reliability and performance to serve most demanding business fax communication requirements. Furthermore server virtualization provides efficient server utilization and cost savings.

Scalability for Unlimited Growth

The ReplixFax for Windows system configurations can start as small as a 2-line departmental fax server system to run both the fax server and the modem gateway software on the same PC server platform. As your fax processing requirements grow, the ReplixFax system can easily scale by adding additional fax servers, modem gateways and fax lines across any IP network to provide unlimited system capacity and meet your demanding enterprise faxing needs.

ReplixFax for Windows technical specifications

| | |
|--|--|

| ● Inbound routing | DID, DNIS, CSID, ANI, Fax Port, Network Folder, Network Printer or Manual Routing |
| ● Server-based rasterization for native file attachments | Microsoft Office Files, ASCII text, TIF, PDF, BMP, GIF, JPG, Postscript, HTML |

Automate Outbound Faxing or Electronically File/Archive Your Faxes

The ReplixFax for Windows server supports folder-based automated outbound faxing via its Fax Loader utility. The Fax Loader offers a convenient alternative to fax-enable your application without the need of integrating Fax APIs directly into your application. The ReplixFax server also offers a Delivery Manager utility, which allows you to electronically file or archive inbound and outbound faxes. You may use the Delivery Manager to archive all faxes for compliance, or selectively file incoming faxes based on certain fax metadata to help streamline your internal fax document workflow.

Web-based Administration

The ReplixFax for Windows server provides a comprehensive, real-time Web interface for fax system administrators to configure fax options and preferences, monitor system status and manage users and fax numbers, and other related tasks. Server logs can be viewed and managed through the Web administration interface and can be used for remote diagnostics and troubleshooting.

The Softlinx Enterprise Fax Solution

Softlinx ReplixFax is an ideal enterprise fax solution to consolidate all of your fax communication needs across multiple office locations, or replace multiple legacy fax servers into a single, centralized Fax over IP (FoIP) system. We helped many enterprise businesses successfully manage their business fax communication needs and save costs by providing a reliable, cost-effective enterprise fax messaging solutions over 30 years.
